PROFESSIONAL SUMMARY

Senior Frontend Engineer with 5 years of experience building scalable SPAs across healthcare billing, ERP, and enterprise platforms. Skilled in React JS, Next.js, TypeScript, Tailwind CSS, and AI tools including MCP and RAG, with experience in cloud deployment and CI/CD. Proven track record of delivering complex multi-module applications, leading teams, and shipping projects ahead of schedule.

TECHNICAL SKILLS

Frontend: React JS, Next.js, JavaScript (ES6+), TypeScript, HTML5, CSS3, Tailwind CSS
State Management: Redux, Redux Toolkit, Zustand, Context API
UI Frameworks: Material UI (MUI), Styled Components, Vuetify
Data Viz: Recharts, Highcharts, Chart.js
API: Axios, REST APIs
Tools: Git, GitHub, GitHub Actions (CI/CD Pipelines), Vercel, Webpack, Vite
AI Tools: GitHub Copilot, Cursor AI, Bolt, Antigravity, Claude, Gemini, ChatGPT, MCP Servers, RAG
Cloud & Backend: Oracle Cloud (Server), Google Cloud (Integration), AWS S3, Supabase
Automation: n8n, Make.com
Soft Skills: Team Leadership, Mentoring, Hiring & Talent Acquisition Participation

PROFESSIONAL EXPERIENCE

Frontend Developer — React JS | Nexus Billing Group

January 2023 – January 2026 | Healthcare Billing Platform | React, Next.js, Supabase
Nexus Billing Portal — a React-based web application serving U.S. medical and dental providers with end-to-end billing workflows: insurance verification, claim submission, payment posting, credentialing, and multi-role access control. Built as two portals: a client portal for clinics (front end) and an internal portal for medical billers.

Core Development

- Architected the provider-facing billing dashboard from scratch using React JS and Redux Toolkit, enabling real-time tracking of claims and payment statuses across multiple insurance carriers.
- Developed a multi-step claim submission workflow with form validation, auto-save drafts, reducing submission errors significantly.
- Built an insurance verification module with configurable pre-authorization checklists and real-time eligibility status indicators.
- Implemented a payment posting interface mapping EOB line items to outstanding claims with discrepancy flagging and batch reconciliation.

Modules & Features

- Designed an Accounts Receivable (AR) aging module with 0/30/60/90+ day buckets, payer drill-down, and exportable CSV reports.
- Developed a credentialing module for provider onboarding — document upload, license verification, carrier enrollment tracking, and expiry alerts.
- Built role-based access control for clinic clients, administrators, and billing staff, with route guards, permission checks, and an admin screen that creates clinic accounts (no public sign-up).
- Built MCP (Model Context Protocol) server integrations for Nexus Billing features.
- Implemented RAG-based search within the billing portal.

Performance & Collaboration

- Migrated the portal from React to Next.js, moving sensitive logic from the browser to the server for stronger security.
- Reduced application bundle size by 38% through code splitting, lazy loading, and dependency auditing.
- Built an in-app notification system for claim status updates and payment receipts.
- Mentored junior developers and established a shared component-based design system adopted team-wide.

Frontend Developer — React JS | Codility Solutions

March 2022 – December 2022 | Lahore, Pakistan

Projects

MetriCorr

- Migrated automated survey module to a manual module, eliminating automation errors.
- Integrated Highcharts for dynamic performance visualization and real-time graphical monitoring.
- Led a cross-functional developer team — achieving project delivery two weeks ahead of schedule.

ERP Pack

- Built user, admin, and super-admin modules plus nine functional modules in a large-scale ERP platform.
- Developed dashboards, calendar, and sorting filters for attendance tracking and performance charting.
- Used Axios for API integration and Redux for state management across a scalable module architecture.
- Enhanced dashboard and navigation layouts using MUI for responsive, intuitive user interfaces.
- Refactored class components to functional components with React Hooks, improving maintainability.

Associate Software Engineer | Coeus Solutions

April 2021 – November 2021 | Lahore, Pakistan

Workhub is Coeus's home product which comprised three sub-modules: Workhub Client, Workhub Scheduling, and Workhub Admin.

Workhub

- Enhanced layouts using vuetify templates.
- Built client-facing web interfaces for Workhub Client, Scheduling, and Admin using React JS, HTML, CSS, and JavaScript ES6+.
- Integrated third-party APIs using Axios and managed UI state using React hooks and Context API.
- Participated in code reviews within a team-based development workflow.

OTHER PROJECTS

Cedar Financial — IP Portal | Freelance | React

- Built a client-facing dashboard for invoice and revenue management: client overview and onboarding, revenue charts (daily, gross, net, and profit), and leaderboards for top clients and top revenue collectors. Led a junior team.

Reown Logix | Freelance | React

- Built the frontend of an office management system. Led a junior team.

Villaex Technologies | Freelance | React, Next.js

- Migrated the company website from React to Next.js.

Taxology | Codility Solutions | React

- Rebuilt an existing WordPress site as a React application, matching the original design and content on a component-based frontend; resolved recurring WordPress plugin limitations and provided a scalable foundation.

EDUCATION

Bachelor of Sciences in Information Technology | 2016 – 2020

Punjab University College of Information Technology (PUCIT), Lahore

CERTIFICATIONS

- React — The Complete Guide (Udemy)
- JavaScript (Codecademy)
- Python for Everybody (Coursera)
- Python for Data Science (IBM)
